3. Prioritizing Requirements. New requirements, including defects identified as part of your user testing activities, are prioritized by your project stakeholders and added to the stack in the appropriate place. Your project stakeholders have the right to define new requirements, change their minds about existing requirements, and even reprioritize requirements as they see fit.

Complexity characterises the behaviour of a system or model whose components interact in multiple ways and follow local rules, meaning there is no reasonable higher instruction to define the various possible

interactions.. The term is generally used to characterize something with many parts where those parts interact with each other in multiple ways, culminating in a higher order of emergence ...
