

textile processing and properties pdf

Textile manufacturing is a major industry. It is based on the conversion of fiber into yarn, yarn into fabric. These are then dyed or printed, fabricated into clothes. Different types of fibers are used to produce yarn. Cotton remains the most important natural fiber, so is treated in depth. There are many variable processes available at the spinning and fabric-forming stages coupled with the ...

Electrospinning is a fiber production method which uses electric force to draw charged threads of polymer solutions or polymer melts up to fiber diameters in the order of some hundred nanometers. Electrospinning shares characteristics of both electrospaying and conventional solution dry spinning of fibers. The process does not require the use of coagulation chemistry or high temperatures to ...

4 The digital transformation is affecting the way the economy and societies operate, propelling changes in the scale, scope and speed of businesses and the structure of markets. The storage of information in digital binary form – bits rather than atoms – has made data easy to store and costless to share.
