Notation. Fractional designs are expressed using the notation  $I_k \hat{=} p$ , where  $I$  is the number of levels of each factor investigated,  $k$  is the number of factors investigated, and  $p$  describes the size of the fraction of the full factorial used. Formally,  $p$  is the number of generators, assignments as to which effects or interactions are confounded, i.e., cannot be estimated independently of each ...

Fractional calculus is a branch of mathematical analysis that studies the several different possibilities of defining real number powers or complex number powers of the differentiation operator  $D = ()$ , and of the integration operator  $J = \hat{=} \ll ()$ , and developing a calculus for such operators generalizing the classical one.. In this context, the term powers refers to iterative application of a ...

The cell value in any cell of the table gives the column number of the two factor interaction for the  $i$ th row and  $j$ th column. For example, to know which column is confounded with the interaction of the first and second columns, look at the value in the (1,2) cell. The value of 3 indicates that the third column is the same as the product of the first and second columns.
