electrocapillarity behavior of au(111) in so42 and f - 2 = 1, the bending is two-dimensional, and the appropriate form for m s is $e/(1 - \hat{i})$ is combination of elastic constants is termed the biaxial modulus. now the appropriate form of the gibbs equation is given by eq 3. **1 2 a i ú b ! d ! / e ! 2 ! . c 0 2 f 1 3 g h i k l m n j**
